

Gracious Precious Ogyiri Asare

graciousogyiriasare.com - gpo.asare@gmail.com - linkedin.com/in/graciousogyiriasare - github.com/sheisgracious

Detail-oriented Computer Science student with an expertise in full-stack development, machine learning, and automated testing. Demonstrated success and passion for developing impactful software, through cross-functional collaboration and data-driven decisions.

EDUCATION

Boston University

Boston, MA

B.A. in Computer Science, Hospitality Administration Minor

Grad: May 2026

- 2x Dean's List distinction
- Relevant courses: Machine Learning Foundations, Database Systems, Data Structures & Algorithms, Functional Programming, Distributed Systems, Probability in Computing, Technology for Musicians

TECHNICAL SKILLS (Ordered by proficiency)

Programming Languages: Python, Swift, HTML/CSS, JavaScript, TypeScript, SQL

Frameworks & Technologies: SwiftUI, Flask, React, Next.js, XCTest, XCUITest, Supabase, TensorFlow, CoreML, Quick

Tools & Platforms: Git, VS Code, Xcode, MongoDB, PostgreSQL, CI/CD, Figma, MySQL Workbench,

Data Science Libraries: Pandas, NumPy, SQLAlchemy, Matplotlib, Scikit-learn

EXPERIENCE

Apple

May 2025 – August 2025

VPG Accessibility QA Automation Intern

Boulder, CO

- Defined and proposed project specifications and scope for major accessibility feature testing for Apple Vision Pro, programming 3 testing features and automated pipelines, enhancing scalable accessibility testing framework.
- Presented to senior leadership under a tight deadline to outline accessibility impact with proposed ML integration for boosting test confidence, security and efficiency.
- Initiated cross-functional collaboration across 2 engineering teams to research adoptable functions and deploy accessibility testing framework, highlighting client/server architecture understanding.

Sponsors for Educational Opportunity

May 2024 – August 2024

Tech Developer Intern

Remote

- Completed 300 hours of rigorous software engineering training focused on data structures, algorithms, and full-stack web development using HTML/CSS, JavaScript and Flask.
- Enhanced software development skills by collaborating in Agile (Scrum) teams, managing sprints and code reviews to develop 2 full stack applications, ensuring high-quality code and timely product delivery.
- Engaged actively in long-term career and mentorship programs to develop professional and practical skills.

PROJECTS

Kickstarter Crowdfunding Recommendation Engine

September 2025 – December 2025

Python, Scikit-learn, XGBoost, TensorFlow Pandas, Matplotlib

- Collaborating with a State Street engineer as a Break Through Tech AI fellow to develop a model predicting Kickstarter campaign success and recommendations.
- Training and evaluating classification models (Random Forest, Logistic Regression, KNN) to achieve 80%+ accuracy.
- Collaborating with a 5-person Agile team to design a recommendation framework that provides actionable insights for improving “at-risk” campaigns.

Spark Bytes- Campus Food Event Platform

March 2025 – May 2025

React (Next.js), TypeScript, Python, PostgreSQL, Supabase, Ant Design

- Collaborated in 4-person Agile team to architect full-stack platform serving BU community, implementing PostgreSQL database with 7 interconnected tables, automated alert triggers, and Supabase authentication with magic link integration.
- Developed responsive React/TypeScript frontend including a dynamic filtering system, address autocomplete for 200+ locations, and favorites management.
- Implemented comprehensive event lifecycle management with CRUD operations, access control via Row-Level Security, and real-time UI updates, reducing food waste discovery time for students.

LEADERSHIP & INVOLVEMENT

Break Through Tech AI at MIT

Cambridge, MA

Fellow

- Participant in a 12-month program involving technical Machine Learning coursework, mentorship, and career development.
- Earned Cornell Machine Learning Foundations Certificate (Certified August 2025)

Girls Who Code

Boston, MA

Bits Lead

- Assist e-board members in planning and hosting events, while recruiting and mentoring STEM students to teach 3rd–5th graders in the Bits & Bytes program, designing engaging Scratch and Python curricula that drove 90% student retention.
